PROMA REHA®

# INVENT

# Bed designed for standard, above-standard and intensive hospital care

Hospital staff and patients alike will appreciate the easy handling of this bed, the comfortable and intuitive operation and the full range of pre-programmed functions. The INVENT bed is fully electrically adjustable with emergency operation on battery backup. Like all our beds, the INVENT stands out for its professional workmanship down to the last detail. Thanks to a wide range of options and modifications, it can be manufactured according to customer requirements.

Unique colour-coded backlit controls without complicated touchscreens make it very easy and intuitive for staff and patients to operate not only in crisis situations but also for people with impaired vision, without glasses or at night.

#### Stable 3-column construction

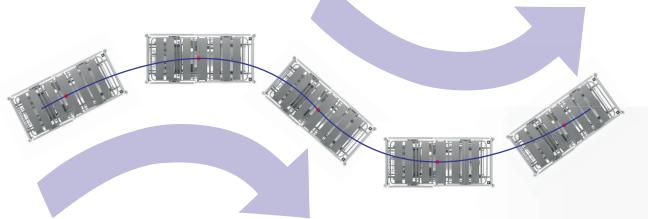

The lifting of the loading area is ensured by three electric columns that firmly connect the chassis to the loading area, thus ensuring its extreme stability and load capacity.

#### Increased load capacity

The solid and stable construction allows a safe load

capacity up to 300 kg.

## Fifth wheel

The fifth wheel ensures easy and intuitive handling of the bed. This feature is particularly useful in rugged areas and when the bed is handled by one person.

#### X-rayable mattress platform

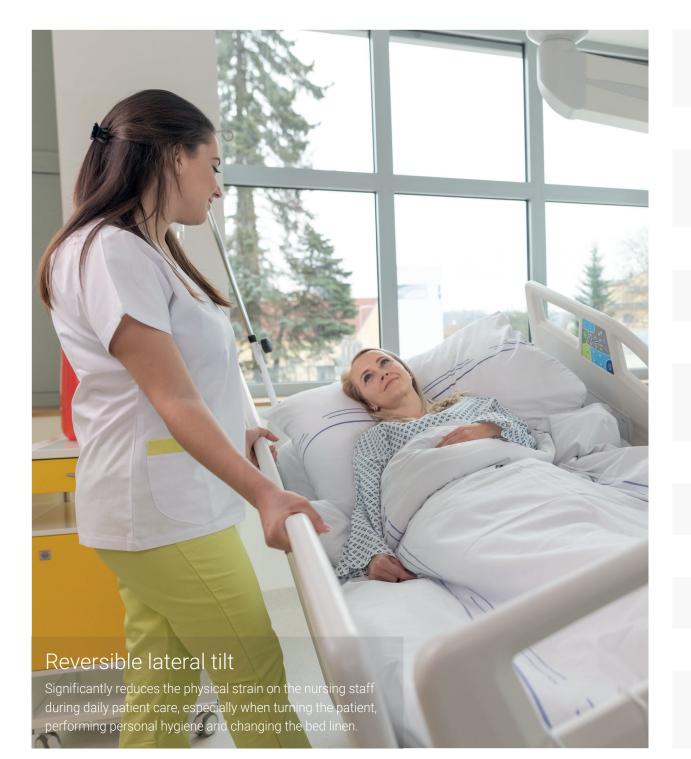

The design of the mattress platform allows comfortable and safe scanning with conventional X-ray equipment.

#### Foldable plastic side rails

Patient protection is provided by foldable plastic split side rails with integrated controls. Robust mechanisms guarantee high strength and superior durability. In case of uncontrolled lowering, they are equipped with fall arresters. Thanks to the movement of the head rail together with the back part, maximum protection of the patient in all bed positions is ensured. In the lowest position, the folded side rails are sufficiently below the mattress level and do not hinder the patient's exit.

Integrated controls in the side rails

With activation button to prevent accidental use

Easily removable boards With safety lock

#### Nurse control

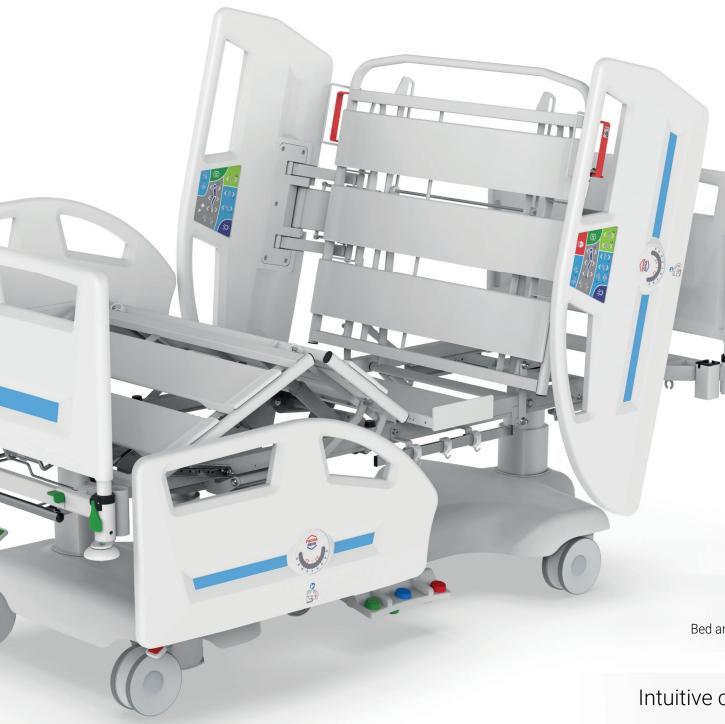

CPR Electric and mechanical

Backup batteries

Bed linen shelf

Plastic side rails For maximum patient safety

#### Horizontal accessories holder

For hanging additional equipment

#### X-rayable mattress platform

Using both C-arm and conventional X-ray cassettes

# Increased load ccapacity 300 kg

Chassis illumination

TENTE brand wheels 150 mm plastic with central brake

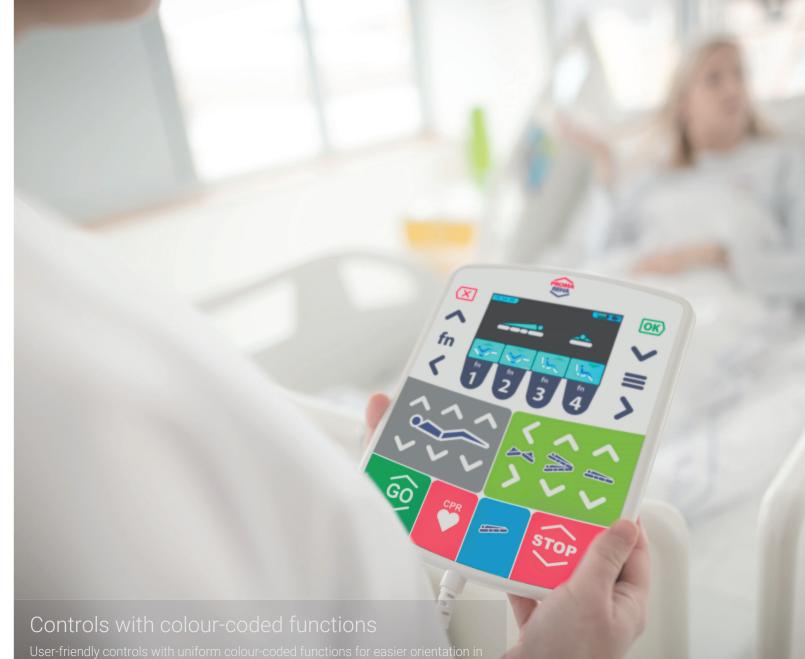

### Universal accessory holder

In every corner of the bed

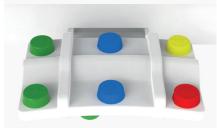

## Inclination indicator

Bed and back part with Fowler and Semi-Fowler position indication

Intuitive controls with colour-coded functions

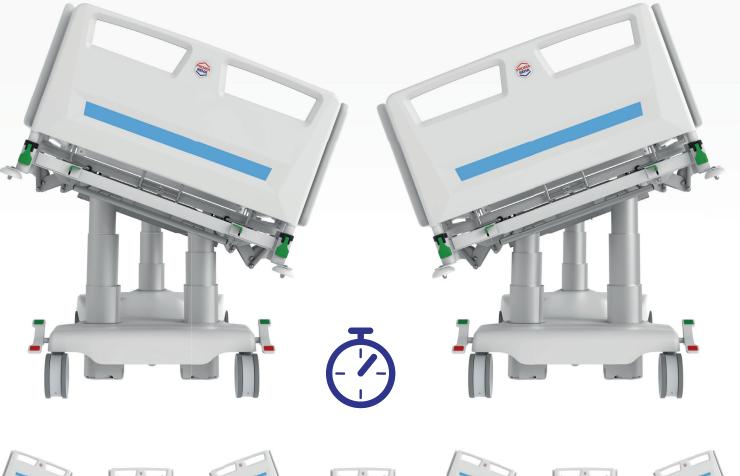

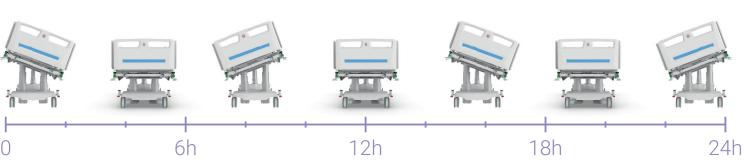

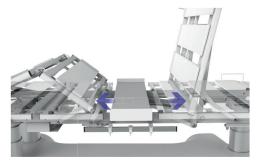

User-friendly controls with uniform colour-coded functions for easier orientation in crisis situations. The colour and illuminated function resolution also makes it easier to operate the bed for persons with impaired vision, without glasses or at night.

#### Automatic lateral therapy

It is a significant benefit especially for patients at high risk of post-operative respiratory complications and patients at high risk of developing decubitus. The hospital staff will appreciate the possibility of easy individual adjustment of all parameters of the selected therapy, in up to eight adjustable programs within a duration of 24 hours.

Double autoregression

Bed linen shelf

Trendelenburg / Antitrendelenburg

Universal accessories holders

#### Weighing system (INVENT PRO)

The beds can be equipped with a calibrated and certified automatic weighing system with the ability to easily set weighing modes, evaluate the measured values and display the results by means of graphs.

Unique bed surface extension system The smooth extension of the bed surface by up to 30 cm with a patented mechanism operated from the headboard brings comfort even to taller patients.

Choice of castors

All PROMA REHA beds are equipped with TENTE branded castors. You can also choose from two types of castors for this bed.

Horizontal accessories holder The standardized stainless steel Euro rail for hanging accessories is equipped with three universal plastic hooks on both sides of the bed.

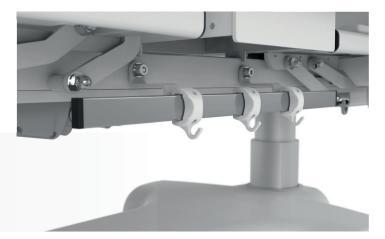

#### Central brake

Safe handling of the bed is ensured by a centrally operated brake. Thanks to the possibility of locking one wheel in the straight direction of travel, the bed can be easily operated by only one person during transport.

#### Bumper wheels

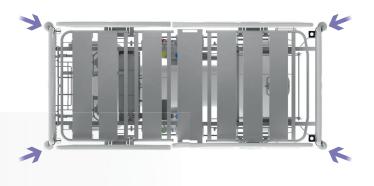

The bumper wheels located at the four corners of the bed are a great help especially during transport.
